Listing of Claims:

This listing of the claims will replace all prior versions, listings, of claims in the application:

1. (currently amended) An electrochemical cell, comprising:

an anode comprising a first solid state lithium metal layer and a second solid state lithium metal layer and having a thin layer of Ag, Al, Sn or other Li alloy-forming metal interposed between the first and second lithium layers ~~a renewable active metal anode, configured for supplementation of the active metal~~;

a cathode structure comprising an electronically conductive component, an ionically conductive component, and a fluid oxidant;

an ionically conductive protective membrane on the first surface of the anode, the membrane comprising,

one or more materials configured to provide a first surface chemically compatible with the active metal of the anode in contact with the anode, and a second surface substantially impervious to and chemically compatible with the cathode structure and in contact with the cathode structure.

2. (currently amended) The cell of claim 1, wherein the ionically conductive protective membrane comprises a composite, the composite comprising,

a first material component in contact with the anode that is ionically conductive and chemically compatible with the ~~active metal of the~~ anode; and

a second material component in contact with the first material component, the second material being substantially impervious, ionically conductive and chemically compatible with the first material component and the cathode structure.

3. (original) The cell of claim 1, wherein the ionic conductivity of the protective membrane is at least 10^{-5} S/cm.

4. (withdrawn) The cell of claim 1, wherein the cathode oxidant comprises air.

5. (original) The cell of claim 1, wherein the cathode oxidant comprises water.

6. (withdrawn) The cell of claim 1, wherein the cathode oxidant comprises hydrogen peroxide.

7. (original) The cell of claim 1, wherein the protective membrane is a composite laminate.

8. (original) The cell of claim 1, wherein the protective membrane is a graded composite.

9. (currently amended) The cell of claim 1, wherein the ~~active metal of the~~ anode is lithium or a lithium alloy.

10. (currently amended) The cell of claim 2, wherein the first component comprises a material selected from the group consisting of a composite reaction product of lithium of the anode ~~active metal~~ with one selected from the group consisting of Cu_3N, ~~active~~ metal nitrides, ~~active~~ metal phosphides, and ~~active~~ metal halides, metal iodides and red phosphorus ~~and active metal phosphorus oxynitride glass~~.

11. (currently amended) The cell of claim 2, wherein the first component comprises a material selected from the group consisting of ~~a composite reaction product of lithium of the anode active metal with one selected from the group consisting of Cu_3N,~~ Li_3N, Li_3P and LiI, LiBr, LiCl, LiF, and LiPON.

12. (original) The cell of claim 2, wherein the second component comprises a material selected from the group consisting of glassy or amorphous metal ion conductors, ceramic active metal ion conductors, and glass-ceramic active metal ion conductors.

13. (original) The cell of claim 2, wherein the second component is an ion conductive glass-ceramic having the following composition:

Composition	mol %
P_2O_5	26-55%
SiO_2	0-15%
$GeO_2 + TiO_2$	25-50%
in which GeO_2	0—50%
TiO_2	0—50%
ZrO_2	0-10%

M_2O_3	0 < 10%
Al_2O_3	0-15%
Ga_2O_3	0-15%
Li_2O	3-25%

and containing a predominant crystalline phase composed of $Li_{1+x}(M,Al,Ga)_x(Ge_{1-y}Ti_y)_{2-x}(PO_4)_3$ where $X \leq 0.8$ and $0 \leq Y \leq 1.0$, and where M is an element selected from the group consisting of Nd, Sm, Eu, Gd, Tb, Dy, Ho, Er, Tm and Yb and/or and $Li_{1+x+y}Q_xTi_{2-x}Si_yP_{3-y}O_{12}$ where $0 < X \leq 0.4$ and $0 < Y \leq 0.6$, and where Q is Al or Ga.

14-20. (canceled)

21. (currently amended) The cell of claim 1 ~~20~~, wherein the bonding coat is Ag.

22-23. (canceled)
